Scheeser Buckley Mayfield has 2 BICSI Registered Communications Distribution Designers [RCDDs] on staff. Each of our RCDDs not only holds the certification, but also brings a unique perspective to the title. This gives SBM the ability to approach structured cabling, and information and communications technology (ICT) systems, from several viewpoints. In addition, 1 of the 2 RCDDs holds Professional Engineer licenses in multiple states.

## ► Marlon Hathaway, PE, LEED AP, RCDD

Marlon has over 30 years of design experience as an electrical engineer working in the construction industry. Marlon's background working on commercial, industrial, educational, judicial, and health care facilities provides unique insights on integrating ICT systems with other electrical systems. This experience helps eliminate coordination issues and reduces the chance of electrical interference.

## ► Joe Harless, RCDD

Joe spent 10 years installing systems prior to becoming a technology designer in 2002. That experience provides Joe with a unique perspective about design. As a result, his designs are practical, from both an installation and a maintenance perspective. He is detail-oriented, and his design drawings are clear and concise, minimizing change orders and unexpected costs during construction.

SBM's team of RCDDs provides a specialized collection of professionals to help any ICT project run smoothly. With combined experience of over 50 years, SBM is well positioned to tackle any ICT design project.
