## What is a Registered Communications Distribution Designer?

Registered Communications Distribution Designer (RCDD) is an accreditation awarded by Building Industry Consulting Services International (BICSI). Individuals who earn this certification have demonstrated exceptional knowledge and extensive documented practical experience in the design, integration, and implementation of cabling infrastructures serving Information and Communications Technology (ICT) systems, which are frequently referred to as IT or telecommunications by many construction professionals. Having this certification signifies the designer is trained to incorporate current industry standards and best practices into cabling system designs. This skill enables the RCDD to provide system designs capable of supporting all of the owner's current and planned network technologies into the foreseeable future and beyond.

## Scheeser Buckley Mayfield's RCDDs

SBM has 2 RCDDs on staff:

### ► Marlon Hathaway, PE, LEED AP, RCDD

Marlon has over 30 years of design experience as an electrical engineer working in the construction industry. His background with commercial, industrial, educational, judicial, and health care facilities provides unique insights on integrating ICT systems with other electrical systems. This experience helps eliminate coordination issues and reduces the chance of electrical interference.

### ► Joe Harless, RCDD

Joe spent 10 years with a local contractor installing and designing ICT systems prior to becoming our lead technology designer in 2002. That experience provides Joe with the unique ability to approach designs from both a theoretical and constructability standpoint, creating designs that are clear and concise in order to minimize change orders and unexpected costs during construction. He has designed systems for a multitude of sectors, including education, health care, government, and industry.

## Next Steps

With our RCDDs' combined experience of over 50 years, SBM is well positioned to tackle any ICT cabling design project. Contact us to find out what we can do for your facility.
